## United States Public Release Lesson 2 Lesson Graph [8<sup>th</sup> grade]

### Private Class Work: Students Work on "Warm-Up" Problems Written on the Whiteboard

1. Is this a right triangle?

4.  $1.2\sqrt{4.806}$

2.  $(13.0013 - 3.313) + (3.01 \times .3)$

5.  $2\frac{4}{5} \div 2\frac{1}{10}$

3.  $5\frac{1}{5} - 3\frac{2}{3}$

6. 4, 8, 2, 6 (i.e., use the numbers in 3 equations, with the last=24)

7. 3, 7, 9, 4 (i.e., use the numbers in 3 equations, with the last=24)

While the students work individually, the teacher checks to make sure everyone has completed their homework.

### Public Class Work: Going over the Warm-Up Problems and Homework

1. Yes.  $25 + 144 = 169$

6-1.  $8 \div 4 = 2$ ,  $2 + 2 = 4$ ,  $4 \times 6 = 24$

7-1.  $9 - 7 = 2$ ,  $2 \times 4 = 8$ ,  $3 \times 8 = 24$

2. 10.5913

6-2.  $6 \times 2 = 12$ ,  $12 + 8 = 20$ ,  $20 + 4 = 24$

7-2.  $9 \times 3 = 24$ ,  $27 - 7 = 20$ ,  $20 + 4 = 24$

3.  $1\frac{8}{15}$

6-3.  $4 - 2 = 2$ ,  $6 \div 2 = 3$ ,  $3 \times 8 = 24$

7-3.  $9 - 7 = 2$ ,  $4 \times 2 = 8$ ,  $8 \times 3 = 24$

4. 4.005

6-4.  $8 + 6 = 14$ ,  $14 \times 2 = 28$ ,  $28 - 4 = 24$

7-4.  $9 - 7 = 2$ ,  $2 \times 3 = 6$ ,  $6 \times 4 = 24$

5.  $1\frac{1}{3}$

6-5.  $6 \times 2 = 12$ ,  $8 \div 4 = 2$ ,  $12 \times 2 = 24$

6-6.  $4 \div 2 = 2$ ,  $8 \div 2 = 4$ ,  $4 \times 6 = 24$

Going over Homework – some answers are on the overhead projector and some are recited verbally by students. There is a brief discussion about a few of the problems.

"Quote of the Week" - posted on the blackboard and read by a student: *"What is best in mathematics deserves not merely to be learned as a task, but to be assimilated as a part of daily thought, and brought again and again before the mind with ever-renewed encouragement."* -Bertrand Russell

### Public Class Work: Introduction to Writing Variable Expressions

Variable = A letter representing a value that can change.

*You earn \$7 an hour -> 7h.*

Variable Expression = Contains a variable. E.g. 7h;  $4w + 7$ ;  $x + \frac{9}{2}$

*What if you earn \$7.50 an hour -> 7.5h.*

*Hot dogs sell for \$3 each. Give me a variable expression for N hotdogs -> 3N.*

*If I get 2 hotdogs, how much money am I spending -> \$6.*

Evaluating Expressions = When you substitute a number for a variable, you evaluate the expression.

*Evaluate the expression  $4h + 3$  for  $h = 2$ . Substitute 2 for  $h$  ->  $4(2) + 3 = 11$*

Translating words to variable expressions means:

a) Take words and change them to numbers, b) Take numbers and change them to words

*A number plus negative three ->  $n + (-3)$ .*

*Six less than a number ->  $x - 6$*

*$K \div 8$  -> K over eight, eight into K, or the quotient of K and eight.*

*$15 - B$  -> B less than 15 or fifteen minus a number.*

Variable expressions with more than one operation = use order of operations (i.e., parentheses, exponent, multiplication, division, addition, subtraction)

*Evaluate  $1.5 + 2n$  for  $n = 12$  ->  $1.5 + (2 \times 12) = 1.5 + 24 = 25.5$*

### Public Class Work: Solving Practice Problems from the Textbook

1) Kim's height if she's 6 inches shorter than her mother.  $N - 6$

4) Twice a number.  $2N$

2) The number of calories in 3 slices of bread.  $3C$

5) The quotient of 3 divided by W.  $\frac{3}{W}$

3) Mike's age if he is 3 years older than Jill.  $3 + x$

6) Seventeen less than N.  $N - 17$

*T: Where do we use variable expressions in real life? S1: To find the price of clothes. S2: The density formula.*

### Private Class Work: Students Begin their Homework Assignment

Page 64 from workbook, problems 1-22. Quiz on Friday.

### Public Class Work: Playing "24"

Students choose four numbers, and their classmates have to use them in three equations with the last equation equal to 24.
